DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7, drawn to a method for making a strained SOI layer, classified in class 438, subclass 479.
 - II. Claims 8 and 9, drawn to a semiconductor device, classified in class 257, subclass 347.

Please note that for claim 8, which is directed to a semiconductor device, per se, the method limitations from the incorporation of claim 1 have only been accorded weight to the extent that they affect the structure of the completed semiconductor device. Note that "determination of patentability in 'product-by-process' claims is based on product itself, even though such claims are limited and defined by process, and thus product in such claim is unpatentable if it is the same as, or obvious form, product of prior art, even if prior product was made by a different process", *In re Thorpe, et al.*, 227 USPQ 964 (CAFC 1985). Claim 8 is considered to read upon any structure having a substrate, an insulating layer on the substrate, and a strained single crystal silicon layer on the insulating layer.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be

Art Unit: 2813

made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product of claims 8 and 9 can be made by processes other than that recited in claim 1, such as transferring a strained silicon layer from a second (donor) substrate to the insulating layer, or by using alternate means to impart stress to the SOI layer, such as trenches or side structures formed in the SOI layer.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer M. Dolan whose telephone number is (571) 272-1690. The examiner can normally be reached on Monday-Friday 8:30am-5:00pm.
